

SciVerse ScienceDirect: the best way to target renewable energy professionals

- SciVerse ScienceDirect is Elsevier's full-text scientific online database offering articles from more than 2,500 peer reviewed journals, and more than 11,000 books.
- Elsevier publishes a number of highly acclaimed and influential peer reviewed journals in the renewable energy field. Access to full text articles is limited to subscribing customers in academia, corporate and government organisations. Guest users are able to browse the journals and read the abstracts of articles.
- Elsevier now offers an unprecedented opportunity to target highly qualified and very granular audiences through advertising in the subscriber area as well as in the guest area of SciVerse ScienceDirect.

High relevancy and specific audience

Banner advertisements adjacent to peer reviewed content

For the first time, you can place banner advertisements adjacent to peer-reviewed content. This has not been possible in journals delivered either in print or electronically prior to now.

Measurable and precise lead generation & branding tool

This invaluable tool allows you to target very highly qualified prospects with a measurable and precise lead generation/branding tool. Online campaign statistics are available, allowing you to monitor, analyse and optimise your campaign based on actual results.

Target your advertising

On SciVerse ScienceDirect you can target your advertising on one specific journal or subject category, so you can reach both **vertically** and **horizontally** into a specific topic, reaching far more qualified users of our content than you could with a single print journal.

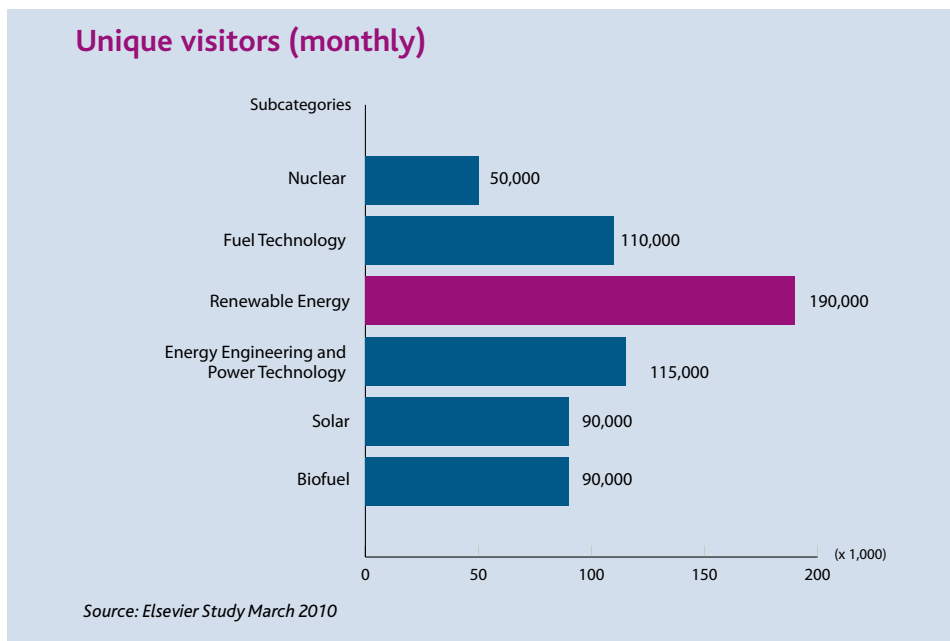

SciVerse ScienceDirect renewable energy titles:

- Energy Conversion and Management
- Applied Energy
- Fuel and Energy Abstracts
- Energy
- Advanced Energy Conversion
- Renewable Energy
- Energy for Sustainable Development
- Renewable and Sustainable Energy Reviews
